Profile Summary

Aspiring software developer with a growing foundation in web technologies and problem-solving, eager to learn and improve through hands-on experience. Passionate about building meaningful applications, exploring modern tech trends, and continuously learning to stay in tune with the evolving tech industry.

Education

Sarvajanik University
B.Tech in Information Technology (2022-2026)
CPI:9.29/10.00 (up to 6th sem)

Technical Skills

Languages: Java (basic DSA)

Frontend: HTML, CSS, JavaScript (ES6+), Tailwind CSS , React.js

Backend & Tools: Node.js(basic), Express.js, Git, Github, Vite, Postman

Database: MongoDB (CRUD, Mongoose)

Core Subjects(academic exposure):OOP, DBMS, Operating Systems, Computer Networks

Areas of Interest: Artificial Intelligence Integration in Web Applications

Projects

1. Mood Tasker (React App)

A mood-based task management web app that adapts the user interface and task flow based on the user's emotional state to improve productivity.

- Developed **core UI components** using React.js and styled them with Tailwind CSS.

- Implemented **mood-based task scheduling**, mood-driven break suggestions, and a weekly planner.

- Utilized **LocalStorage** for persisting tasks and mood history without requiring a backend.

- Focused on creating a **clean, responsive, and adaptive user experience** that changes based on mood.

Tech Used: React.js, Tailwind CSS, Vite, JavaScript, LocalStorage

2. Alumni Dashboard (Internship/Research Info Portal)

A full-stack web platform where juniors can explore internship and research experiences of seniors through searchable and filterable cards.

- Designed a **responsive card-based UI** using React.js and Tailwind CSS to display details like domain, year, company, and type.

- Implemented **search and filter features** (by domain/year/type/company) for quick access to relevant information.

- Built **secure form validation** (only final-year students can submit) and developed an **admin panel** for approving, rejecting, editing, and deleting entries.

- Enabled **Excel import functionality** for bulk data upload.

- Developed the backend using **Node.js, Express.js, and MongoDB (MERN stack)** for handling data storage, validation, and API endpoints.

- Ensured full **responsiveness and scalability** for different devices.

(In Progress)
Working on integrating AI features in the next project (Semester 7) — aiming to combine web technologies with smart AI capabilities.

Learning & Development

- Currently building real-world full-stack project with backend logic.
- Actively solving DSA questions and revising core concepts.
- Exploring AI integration and modern tools to stay aligned with tech trends.
